See blud, the insides are splendid but the outside is a literally a nightmare, like Claude, what you did with lighting in the browser version is way better, you managed to get the vibes and atmosphere of INSIDE but in the unity version, you messed it up, the volcano is way too red in color and you cannot cross the trunk that is on the top of volcano and the mountain feels like a slope ascending, so redo everything out side, and water cools nothing like INSIDE,

Look at INSIDE water vibes.

And look at what you did

And I've been telling you to refer to the damn INSIDE BLOG ON HOW THEY GOT THIS LIGHTING EFFECT USING THE SAME DAMN UNITY ENGINE YOU BEEN USINGGGGGG you do not wanna listen to us? We are paying you.

So for sake of heavens do it right.
